

LITTLE BUDDY

ATTACHMENT

Best of both worlds!

Want the ability to drive big posts and T-posts at any given time?

We have the solution! Our T-Rex 350E mounts onto the side of the 750R, 1000E and 1500E, giving you the option of conveniently driving big posts and T-posts without switching attachments.

The Little Buddy can easily be added onto your Montana Post Driver with very little time and hassle.

The check valves included in the Little Buddy kit in the hydraulic lines, allow your post driver to operate by running your hydraulic switch in one direction and the T-Rex to operate by running your hydraulic switch in the opposite direction.
